

Esraa Ibrahim

Full-Stack Developer | Backend .NET Engineer

Cairo, Egypt • +20 101 014 4768 • esraa.ibrahim9291@gmail.com

PROFESSIONAL SUMMARY

Junior Software Engineer completing a Post-Graduate Computer Science Diploma. Experienced in building full-stack web applications using C#, .NET Core Web API, SQL Server, and React. Brings a strong background in analytical problem-solving and operational discipline from a career in medical laboratory operations. Eager to apply technical training, system-architecture skills, and attention to detail in a hands-on Backend .NET Development role.

TECHNICAL SKILLS

.NET Core Web API	C#	React.js	JavaScript
SQL / SQL Server	Python	Data Normalization	UML Design
Web Development	Agile / Scrum		

EDUCATION

Post-Graduate Diploma in Computer Science

Expected Jul 2026

FGSSR – Faculty of Graduate Studies for Statistical Research, Cairo

Core curriculum: Operating Systems, Data Structures & Algorithms, Computer Architecture.

Graduation Project: Smart Pharmacy Management System

- Backend: C# / .NET with clean-architecture principles for secure, efficient data processing.
- Database: Relational schema design in SQL with a focus on normalization and robust persistence.
- Frontend: Responsive React UI handling complex user interactions and transaction views.
- Docs: Full technical documentation and UML diagrams covering system structure and OO design.

Post-Graduate Diploma in Bioinformatics

Jul 2024

Nile University, Cairo

Complex data analysis; strong foundation in processing and structuring large datasets.

- Phylogenetic Tree Pipeline (Ubuntu/Linux): Built a genomic-sequence processing pipeline using command-line tools and shell scripting to execute multiple-sequence alignments and construct evolutionary trees.
- Data Analysis & Scripting (R & Python): Engineered scripts to clean, analyze, and visualize complex datasets, bridging scientific logic with programmatic execution.

Bachelor of Science in Biotechnology

Jul 2023

Tanta University, Egypt

Rigorous foundation in scientific logic, data precision, and experimental design.

- Genomic & Protein Data Analysis: Hands-on laboratory projects analyzing genetic sequences and protein structures with strict data-integrity protocols.
- Experimental Modeling: Structured workflows to isolate, culture, and evaluate biological samples, translating raw metrics into analytical reports.

PROFESSIONAL EXPERIENCE

Senior Medical Laboratory Chemist

Nov 2024 – Present

Tahrir Branch, Cairo, Egypt

- **Branch Operations & Governance:** Direct daily operational, administrative, and clinical workflows for a high-volume branch, optimizing throughput and ensuring strict regulatory compliance.
- **Financial Accountability:** Primary financial custodian — tracking weekly operational expenses, managing petty-cash logs, and handling reimbursement documentation.
- **Data Integrity & QC:** Oversee high-stakes laboratory testing workflows with a zero-tolerance approach to error, maintaining total accuracy in patient diagnostic records.
- **Team Leadership:** Manage, mentor, and coordinate a cross-functional team of laboratory professionals, aligning schedules and responsibilities to maximize daily efficiency.
